

I recently started using XM radio and with that have now used it on 2 seperate road trips of over 8 hours. The advantage I have with the new local traffic system is the fact that the XM Radio has the city's listed and all I do is tune into the station with the name of the city related to where I am. In the past I have had to search through local radio stations not knowing which one's were primarily traffic and were broadcasting from an area relative to where I was travelling.

This type of fight from the NAB also continues the ever growing dependence by private companies to use the Federal Government to protect their monopolies and business practices. This is not a responsible way for any private company to continue it's primary business. Please do not allow the NAB to continue with these frivolous fights.
